IN THE CLAIMS:

The status and content of each claim follows.

1. (currently amended) A method of ~~providing an identification key for~~ using a printing device consumable, said method comprising
storing ~~said an~~ an identification key in a memory affixed to said printing device consumable,
receiving said identification key in a printing device and
accepting said printing device consumable for use in said printing device only if said identification key identifies a compatible printing device consumable,
wherein said accepting said printing device consumable comprises unlocking a locked locking mechanism that, when locked, disables either said printing device consumable or said printing device.
2. (original) The method of claim 1, wherein receiving comprises uploading said identification key from said memory to a memory of said printing device.
3. (original) The method of claim 1, further comprising uploading an identification interface from said memory to said memory of said printing device and receiving said identification key through said identification interface.
4. (currently amended) A method for verifying ~~providing an identification key to verify identification of~~ a printing device consumable, said method comprising:
storing an identification key on a printing device consumable memory; ~~[[and]]~~

200207015-1

10/650,649

interfacing said memory with said printing device;

verifying said printing device consumable for use with said printing device based on said identification key; and

disengaging a locking mechanism that selectively disables said printing device upon verification of said identification key;

wherein said printing device periodically reengages said locking mechanism prior to re-verifying said identification key.

5. (original) The method of claim 4, further comprising uploading said identification key from said memory to a printing device memory.

6. (original) The method of claim 5, further comprising verifying said identification key on said printing device.

7. (original) The method of claim 6, wherein said verifying said identification key comprises:

checking said identification key against a list of authorized keys for said printing device; and

enabling use of said printing device consumable by said printing device if said consumable is compatible with said printing device.

8. (original) The method of claim 7, further comprising storing said list of authorized keys on said printing device memory.

200207015-1

10/650,649

9. (original) The method of claim 4, further comprising:
uploading an identification interface from said memory to said printing device; and
accessing said identification key on said memory through said identification interface.
10. (original) The method of claim 9, further comprising verifying said
identification key on said printing device.
11. (previously presented) The method of claim 6, wherein said verifying said
identification key comprises:
checking said identification key against a list of authorized keys for said printing
device; and
enabling use of said printing device consumable by said printing device if said
consumable is compatible with said printing device.
12. (original) The method of claim 9, wherein said printing device
consumable is inoperable in said printing device until said identification key has been
verified.
13. (original) The method of claim 9, wherein said consumable is locked with
a locking mechanism and the method further comprising unlocking said locking mechanism
after said identification key has been verified.
14. (original) The method of claim 13, wherein said unlocking comprises
receiving a control signal to unlock said locking mechanism from a printing device controller.

15-21. (cancelled)

22. (currently amended) A consumable for use with a printing device, said consumable comprising:

a printing device consumable; [[and]]

a memory coupled to said printing device consumable storing an identification key for identifying said printing device consumable with respect to said printing device; and

a locking mechanism on said printing device consumable that renders said printing device consumable unusable until disengaged in response to verification based on said identification key.

23. (original) The consumable of claim 22, further comprising a wireless interface communicatively coupled to said memory through which said consumable can communicate with said printing device.

24. (original) The consumable of claim 22 further comprising a wired interface communicatively coupled to said memory through which said consumable can communicate with said printing device.

25. (original) The consumable of claim 22, further comprising an identification interface stored on said memory, which allows access and use of said identification key on said memory.

26-28. (cancelled)

200207015-1

10/650,649

29. (currently amended) A printing device comprising:

a printing device interface configured to communicate with a memory affixed to a printing device consumable installed in said printing device; [[and]]

a printing device controller programmed to receive an identification key from said memory through said printing device interface to identify said printing device consumable;

and

a locking mechanism for selectively rendering said printing device inoperable,

wherein said printing device controller is programmed to unlock said locking mechanism only

if said identification key identifies a compatible printing device consumable.

30. (original) The printing device of claim 29, further comprising a locking mechanism for selectively rendering said printing device inoperable, wherein said printing device controller is programmed to unlock said locking mechanism only if said identification key identifies a compatible printing device consumable.

31-48. (cancelled)

49. (new) The method of claim 1, wherein said locking mechanism comprises a mechanical locking mechanism and unlocking said locking mechanism comprises disengaging said mechanical locking mechanism.

50. (new) The method of claim 1, wherein said locking mechanism comprises an electronic locking mechanism and unlocking said locking mechanism comprises disabling said electronic locking mechanism.

200207015-1

10/650,649

51. (new) The method of claim 4, wherein said locking mechanism comprises a mechanical locking mechanism and disengaging said locking mechanism comprises physically disengaging said mechanical locking mechanism.

52. (new) The method of claim 4, wherein said locking mechanism comprises an electronic locking mechanism and disengaging said locking mechanism comprises disabling said electronic locking mechanism with a control signal.

53. (new) The method of claim 4, further comprising reengaging said locking mechanism whenever said printing device is powered up.

54. (new) The method of claim 4, further comprising reengaging said locking mechanism whenever said printing device receives a new printing device consumable.

55. (new) The method of claim 4, further comprising reengaging said locking mechanism whenever said printing device completes a print job.

56. (new) The method of claim 4, further comprising reengaging said locking mechanism whenever said printing device has printed a specific number of pages

57. (new) The method of claim 4, further comprising reengaging said locking mechanism after a specific period of time after a previous verification of said printing device consumable.
